

SEMICONDUCTOR INTEGRATED CIRCUIT HAVING A PLURALITY OF
CIRCUIT REGIONS WHERE DIFFERENT POWER SUPPLY VOLTAGES ARE
USED AND METHOD OF MANUFACTURING THE SAME

5

ABSTRACT OF THE DISCLOSURE

10 A semiconductor integrated circuit has a first
circuit region using a first power supply voltage and a
second circuit region using a second power supply voltage
different from the first power supply voltage. The first
circuit region is manufactured by a first design rule in
15 accordance with the first power supply voltage, and the
second circuit region is manufactured by a second design
rule in accordance with the second power supply voltage.
